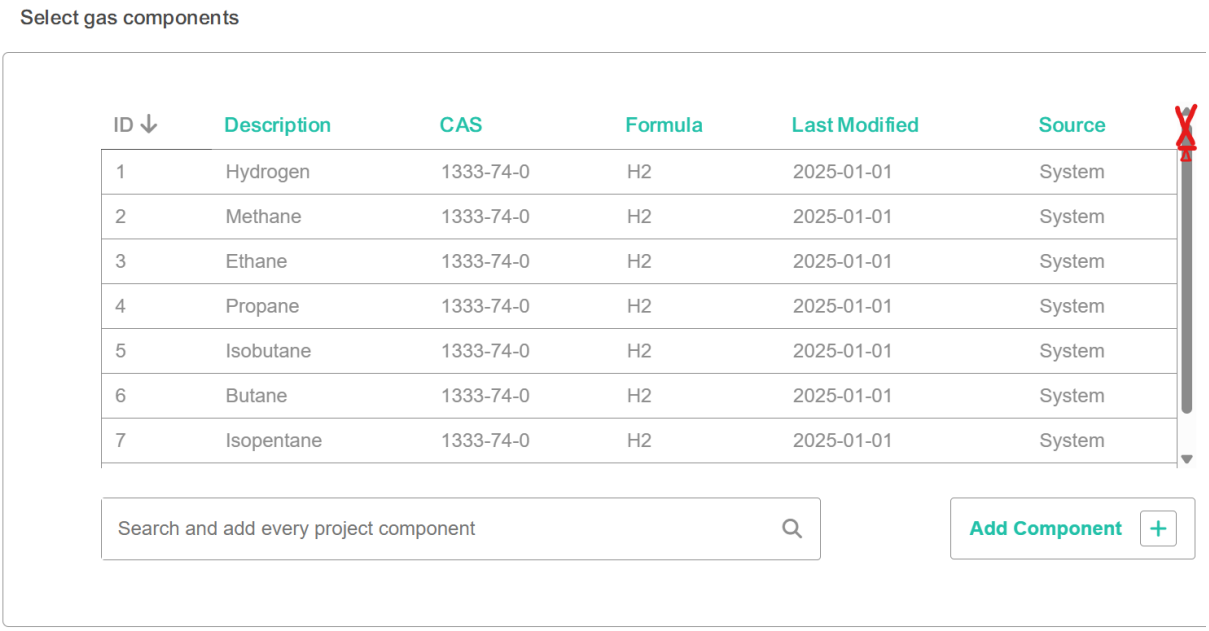
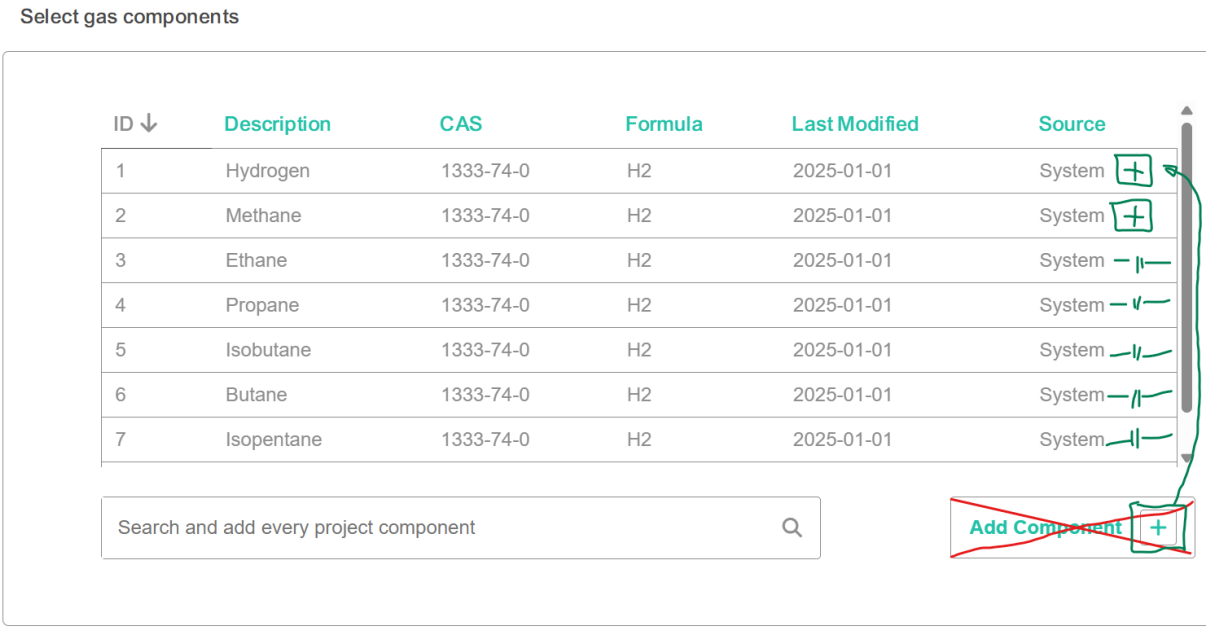
UI comments, 2025-05-03

1. Gas components vertical scroll is including the table header which was not the intended behavior. Please change vertical scroll inclusion to only include the list of components:

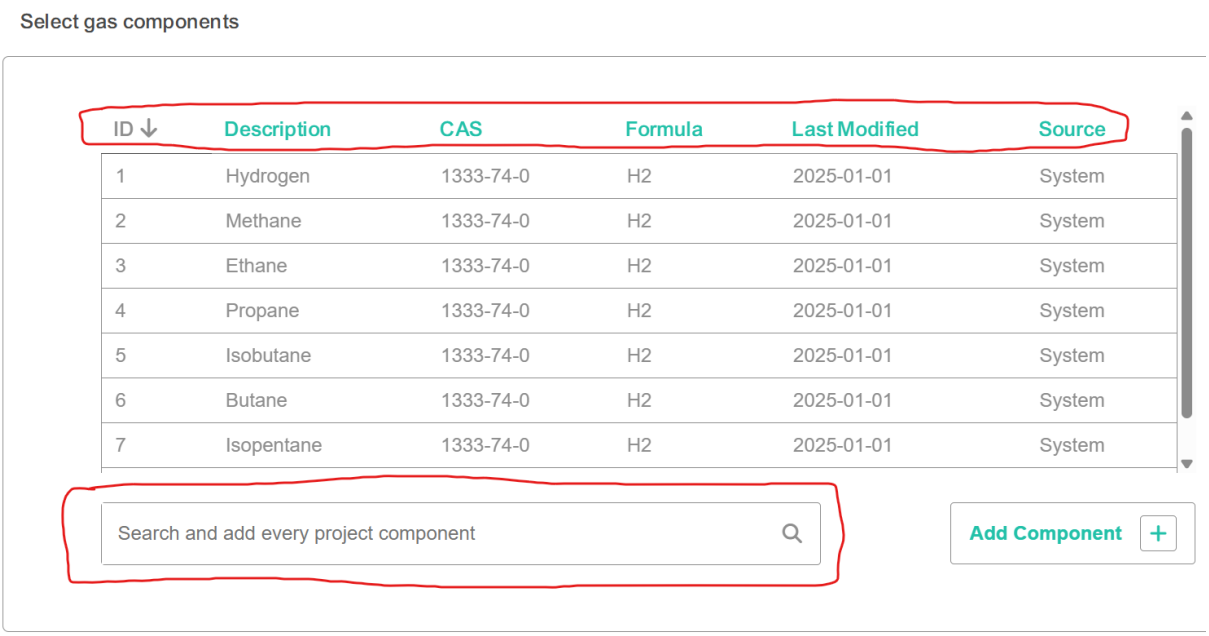


2. Gas components button for “Add component” was intended to align with the table right border – not the vertical scroll right border. However, I think this button can be excluded completely since I like your solution where a clicked component item is immediately added to the list of “Selected component(s)” – hence, removal of “Add component” button is preferred if “add icon” is added to each row in the table:

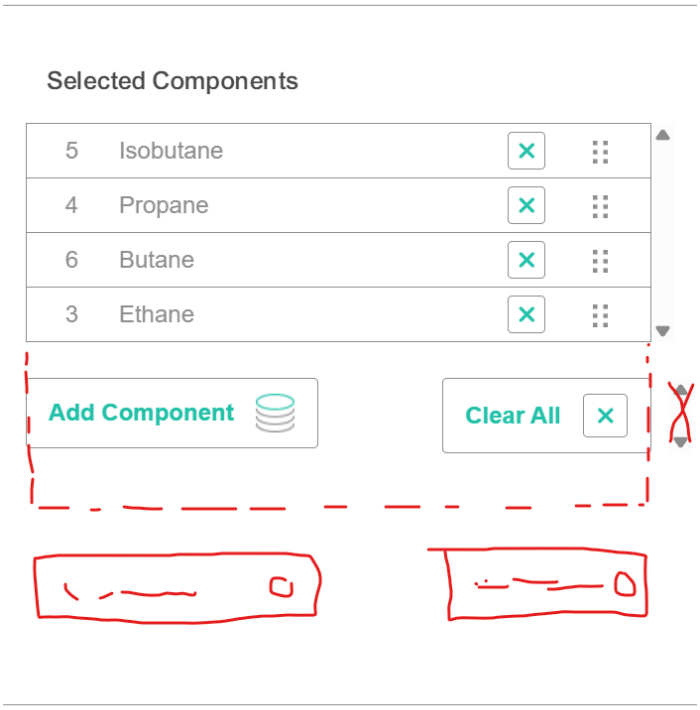


UI comments, 2025-05-03

3. Javascript sort and search/filter function for “Select gas components” is not functional:

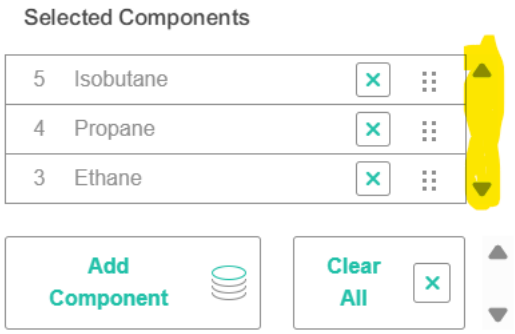


4. Selected components should have a container with fixed height to avoid vertical movement of buttons “Add component (((change to “Load from library” as per PSD)))” and “Clear all” depending on how many component items are added in the list, also refer to PSD and remove vertical scrollbar for the buttons:

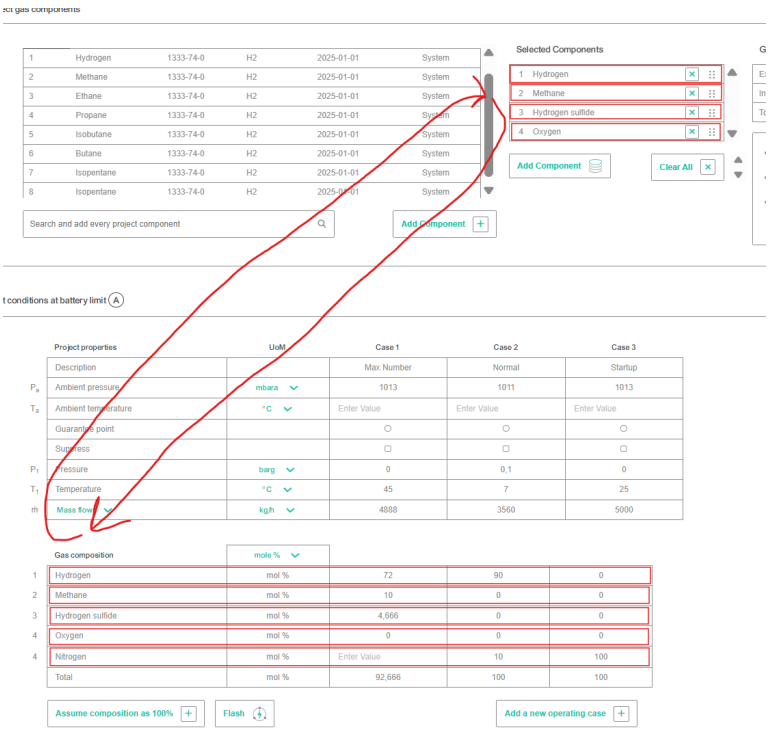


UI comments, 2025-05-03

5. Scrollbars shall only be shown when they are needed, i.e. when more information are listed than what is visible in container vertical height:

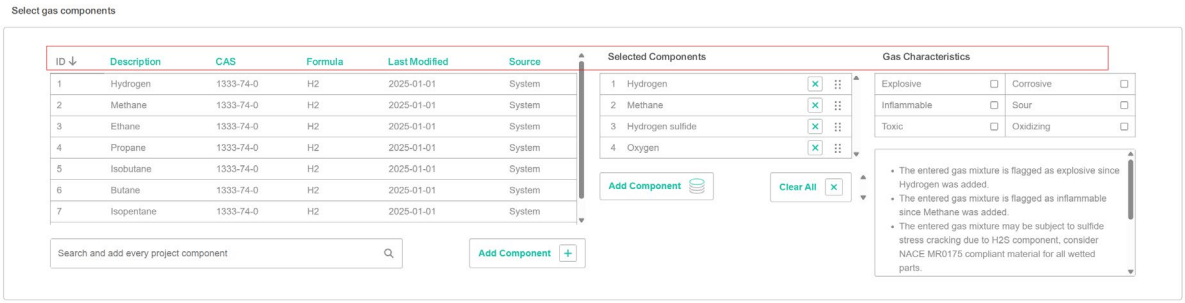


6. When the position of a “selected component” is changed by user drag N drop, the order of the components shall also be updated in the “Gas composition” section as it should always match with the order of “selected components” – that is the whole purpose of the function to allow order change of components:

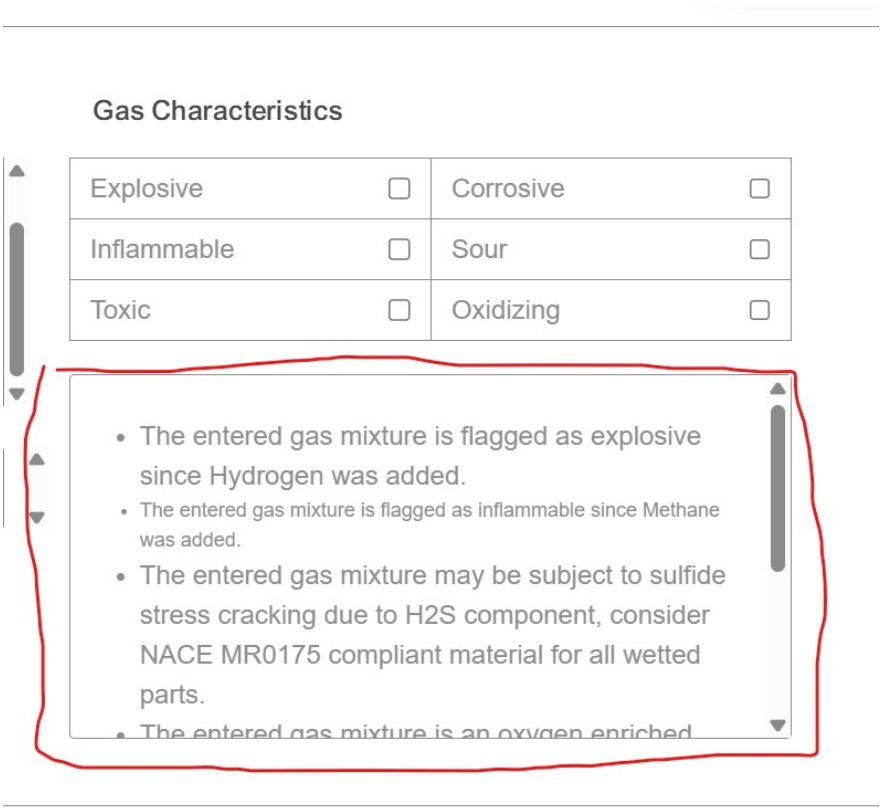


UI comments, 2025-05-03

7. Inconsistent header sizing – headers outside the grey border container shall be a size and headers inside the grey border container shall be a smaller size.



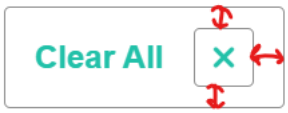
8. Make the Gas characteristic notes text less significant, perhaps smaller font-size or similar:



9. Scrollbars are in general not matching with PSD design. Reduce width to make them less significant.

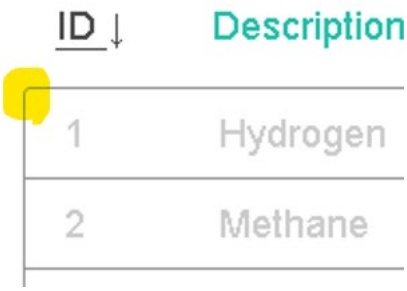
UI comments, 2025-05-03

10. Button – bad icon quality (please make icons look beautiful and not pixly) and icon margin differs from top and bottom to right side (try button padding: 10px 10px 10px 15px;):



11. Check mark and radio button design is not matching well with PSD.

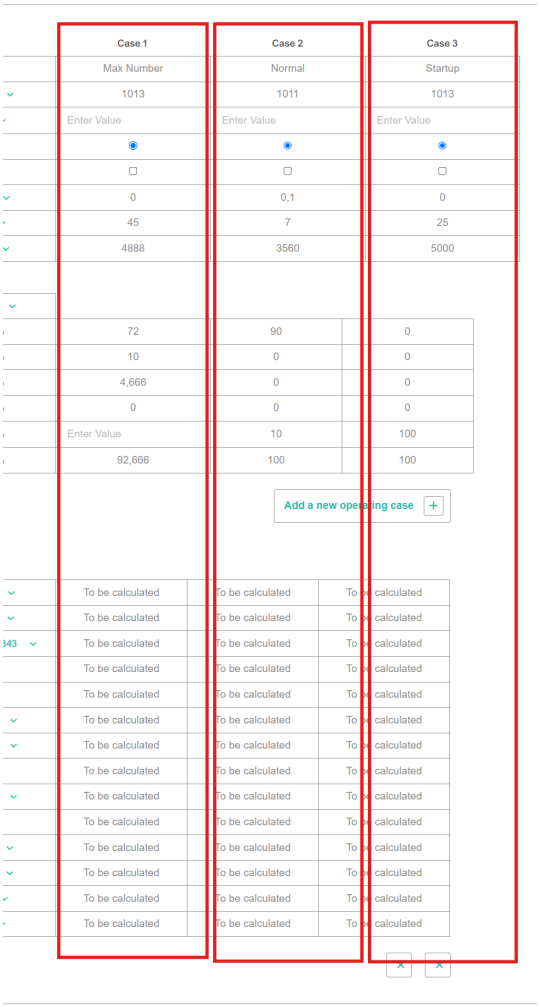
12. Container corners are not matching well with PSD design. It shall be round corners, see example:



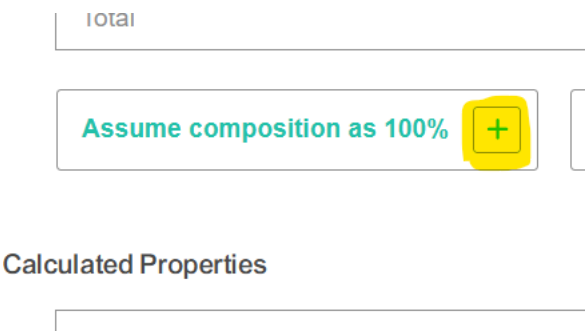
13. Project properties radio button, not check mark (!!!) – only one shall be selectable as guarantee point:

14. Project input and property columns need to align at all times as they are essentially the same column (!!!):

UI comments, 2025-05-03



15. This should be a check box button. Refer to PSD:



16. Project property columns add / delete function is not available. It has to be minimum "Case 1" – which can't be deleted. Other cases shall be added with button "Add new operating case" which essentially adds a new column called "Case 2", "Case 3" and "Case 4" etc. The button "Add new operating case" is center aligned under "Case 1" – each other case has a delete button which is also center aligned under the column on the same vertical position as the button for "Add new operating case", see mark-up:

UI comments, 2025-05-03

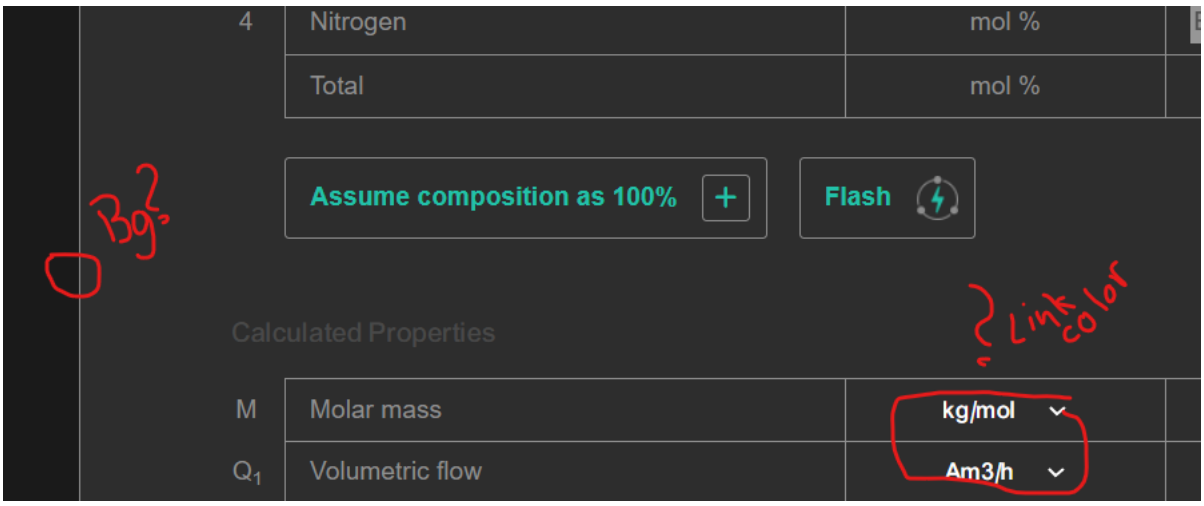
Inlet conditions at battery limit (A)

	Project properties	UoM	Case 1	Case 2	Case 3
	Description		Max Number	Normal	Startup
P_a	Ambient pressure	mbara	1013	1011	1013
T_a	Ambient temperature	°C	Enter Value	Enter Value	Enter Value
	Guarantee point		◉	◉	◉
	Suppress		☐	☐	☐
P_1	Pressure	barg	0	0,1	0
T_1	Temperature	°C	45	7	25
$\dot{m}$	Mass flow	kg/h	4888	3560	5000

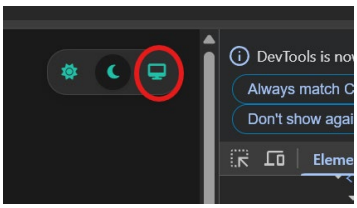
	Gas composition	mole %			
1	Hydrogen	mol %	72	90	0
2	Methane	mol %	10	0	0
3	Hydrogen sulfide	mol %	4,666	0	0
4	Oxygen	mol %	0	0	0
4	Nitrogen	mol %	Enter Value	10	100
	Total	mol %	92,666	100	100

Assume composition as 100% + | Flash

17. Dark theme strange look by some items having a background, the “green” link color is for some reason removed from some items like drowndown lists? Please work a bit more on the dark theme…



18. What is the intended functionality of the desktop icon? It is not working now?



UI comments, 2025-05-03

19. All these are user input fields – not text boxes:

Inlet conditions at battery limit (A)

	Project properties	UoM	Case 1	Case 2	Case 3
	Description		Max Number	Normal	Startup
P_a	Ambient pressure	mbara	1013	1011	1013
T_a	Ambient temperature	°C	Enter Value	Enter Value	Enter Value
	Guarantee point		◉	◉	◉
	Suppress		☐	☐	☐
P_1	Pressure	barg	0	0,1	0
T_1	Temperature	°C	45	7	25
$\dot{m}$	Mass flow	kg/h	4888	3560	5000

	Gas composition	mole %			
1	Hydrogen	mol %	72	90	0
2	Methane	mol %	10	0	0
3	Hydrogen sulfide	mol %	4,666	0	0
4	Oxygen	mol %	0	0	0
4	Nitrogen	mol %	Enter Value	10	100
	Total	mol %	92,666	100	100

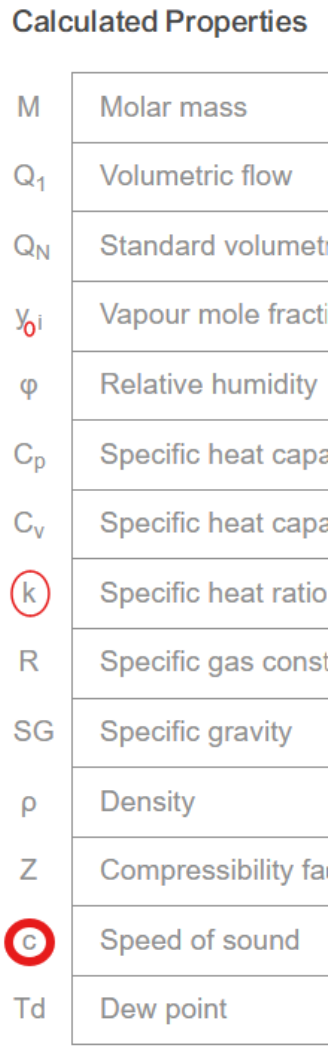
Assume composition as 100% + | Flash | Add a new operating case +

20. All user input fields as shown above shall have the placeholder center-aligned:

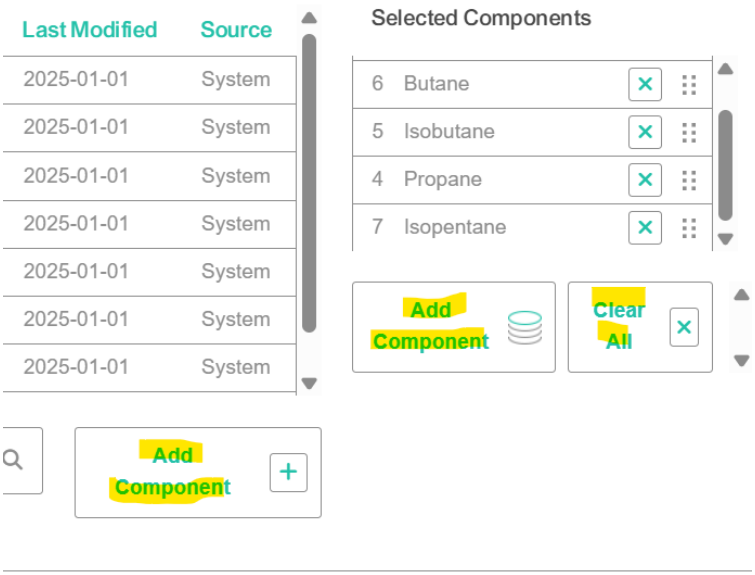
72
10
4,666
0
Enter Value
92,666

21. Symbols of calculated properties are not matching with PSD. Please consider to use Times New Roman for these symbols to better clarity/look. For specific heat ratio it should be κ and not normal k. Please remove “space” between y and i:

UI comments, 2025-05-03



22. Some buttons behave strange and breaks line during resolution change:



UI comments, 2025-05-03

23. Quote price to add “drown down list” under Calculated properties section. Calculation method for EOS (Equation of State) shall be selectable, either “Ideal gas”, “Peng Robinson” or “Soave Redlich-Kwong”.

24. Quote price to add javascript decimal rounding as a function for all calculated properties with a single control but also to allow individual control of each individual calculated property. For example, perhaps 2 decimals (.00) are selected for all calculated properties. But maybe for a certain property I want to be able to set 3 decimals (.000) – that should be possible by individual control for that specific field while all other remain at two decimals (.00). If I change the global function to for example 1 decimal (.0) then my individual set field of 3 decimals (.000) is automatically adjusted to 1 decimal (.0) and it has to be manually updated again if 3 decimals (.000) are desired for that specific field.

25. Quote price to add a fixed Bootstrap top bar navigation.

26. Quote price to add a toggleable Bootstrap sidebar for project settings.

27. Quote generic price for front-end development of each new project page that is required based on this similar design.

28. Quote price to work with my back-end team for design integration during coming months.
